PRODUCT FEATURES

- **Tool-free Seating Adjustment:** Therapists or carers can quickly and easily make adjustments without the need for any tools.
 - **Seat Depth:** Backrest can be quickly and easily adjusted to achieve two seat depths with a 50mm range.
 - **Seat Width:** Armrests are interchangeable for left/right side, swap sides to achieve two seat widths with a 50mm range.
- **Zero Gravity Positioning:** Creates a feeling of weightlessness and redistributes pressure off the lower back for pain management.
- **Oedema Management:** Leg elevation above the heart promotes drainage of lower limb swelling, aids circulation, and reduces fatigue.
- **Adjustable Headrest:** Electrically adjustable via the handset, the headrest cushion can be tilted forward and backward for optimal support.
- **Integrated Leg Extension:** Suits most user heights without the need to alter the legrest or height of the chair. The leg extension can also be easily removed for users with specific heel care needs
- **Vertical Lift Mechanism:** Offers sitting height adjustment for taller users and a stable sit to stand motion that removes the sensation of sliding forward for improved confidence. Available on all models without compromising SWL, unlike competing products.
- **Effortless mobility and Safety:** Large directional castors are engaged by activating a rear carer foot pedal. Castors are not in contact with the floor when in a neutral seated position, ensuring a strong base of support. This also removed any risk of sideways movement as opposed to other products with front swivelling castors
- **Transport mode:** For safety, all electrical functions are inactivated while castors are engaged to prevent the chair from being activated while mobile.

INTERCHANGEABLE BACKRESTS AND SEAT CUSHIONS

All backrest cushions have adjustable filling and support wedges are also available to meet the unique postural requirements of the user.

1. **Waterfall (standard):** For users who require targeted backrest support, the waterfall option allows for all 3 x cushions to be individually positioned to best suit a user's requirements. Can also be used for kyphosis positioning.
2. **Classic (accessory):** Traditional backrest shape with lateral adjustment pockets for gentle contouring and upright sitting support
3. **Advanced Immersion (accessory):** Four adjustable chambers create an immersive and highly supporting backrest for more pronounced upright sitting support and accommodation of kyphosis.

Hybrid Cushion Technology: Unique foam-in-cell air cushion automatically redistributes pressure and maximises user comfort.

After-Market Cushion Compatibility: Pre-cut seat structure accommodates third-party cushions such as ROHO without compromising performance or infection control.
